Read Me First

Your safety and the safety of those around your pool area is very important to us. Read this assembly guide before assembling your fence, paying particular attention to any safety notices. Please keep this assembly guide safe for future reference.

Proper Use

This product is intended to provide safety around pool areas and should not be used for any other purpose. Note the following:

- Ensure the fence is placed on a flat and level surface. If any part of the patio/installation area is sloped or contains a step, consult with your distributor before assembly.
- The fence is a tension-based system. The fence must be installed either as a "closed loop" (with all mesh fence sections connected to one another using the spring-loaded safety latches), or the two ends of the fence must be securely fastened to a wall or similar structure (consult with us or your local hardware store when selecting appropriate fixings).
- Do not use your fence as a clothesline. The weight of hanging towels, wet bathing suits, etc. will cause the top border to sag and could eventually compromise the safety of your fence. This is also not covered by warranty.
- Clean and maintain your fence regularly as described in **Cleaning & Maintenance (page 11)**.

Disclaimer

The manufacturer and/or the distributor decline all responsibility and damages in the event of failure to observe the instructions provided in this guide for assembly, installation, maintenance, and proper use of the product. The manufacturer and/or distributor will not be held responsible for any damages to personal property or real estate or any bodily injuries whether caused directly or indirectly by the product. The manufacturer and/or the distributor further decline all responsibility for injury due to negligence and the warranty automatically expires if the product is not properly maintained.

Assembly and installation can vary depending on application. This assembly guide serves only general and typical situations. Please contact your distributor with any questions.

In The Box

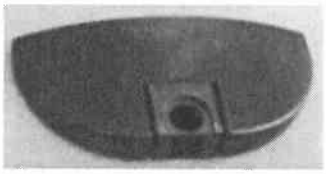
You'll find the following items in your shipment:

ⓘ **Note:**

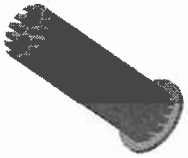
If there's a problem with any of the items in your shipment or items are missing, please thoroughly check the packaging for any lose items before contacting your distributor.

Base Parts

Fence Base



"D" End



Pin Guide

Pin Guide Nut

Alignment Plate

Base Plug

Fence Parts

Mesh Fence Sections

Spring-Loaded Safety Latches

Assembly

Before assembling your fence:

- Ensure the patio or installation area is clear of obstacles and has been recently cleaned to ensure any deteriorating pool chemicals are removed from the surface.
- Place the fence bases in position around the pool area and place the rest of the parts nearby ready for assembly. Ensure all parts are present and in good condition.
- Do not fill the fence bases with water prior to assembly and final positioning.

Overview

The fence bases will be assembled in sections according to the length of the mesh fence panels supplied (typically 4 bases or 4 fence mesh panels long, measuring 12ft). The two ends of the section should be assembled as shown in **End Section (page 7)**. The mid-section connections should be assembled as shown in **Mid-Section (page 9)**.

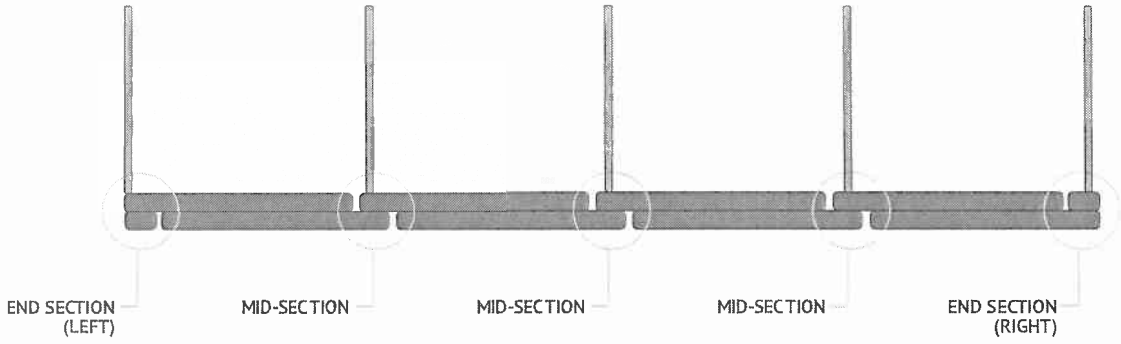


Figure 1: Assembling an End Piece

ⓘ **Note:**

If you prefer, you can watch our assembly instructions video by scanning this QR code from a smartphone:

End Section

Refer to Figure 2 and follow the instructions below:

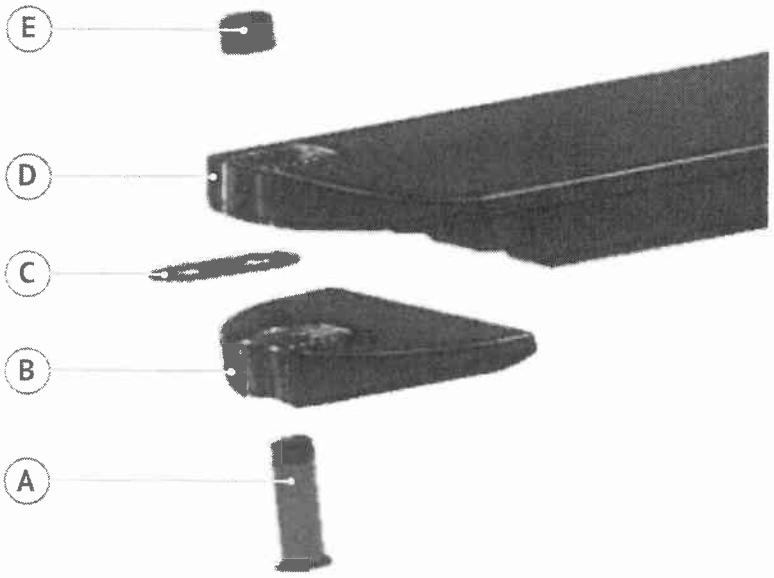

Figure 2: Assembling an End Section

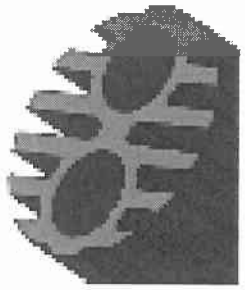
1. Insert a pin guide (A) from the bottom up into a "D" end (B).
2. If connecting this end section to another end section, place an alignment plate (C) over the pin guide (A).

> ⓘ **Note:**
>
> An alignment plate (C) is not required if this end section will not connect to another section of fence (i.e., if this end piece is being fixed to a wall).

3. Position the "D" end (B) up into the gap on the underside of the fence base (D) and ensure the pin guide (A) passes through the hole in the fence base (D).

Note:

The pin guide has two holes (labelled 1 and 2). Rotate the pin guide so that hole 1 is positioned towards the edge of the base. This allows the fence pin to angle if the fence is not going in a straight line.



4. Place the pin guide nut (E) on the pin guide (A) and tighten the nut to secure the assembly.

Mid-Section

Refer to Figure 3 and follow the instructions below:

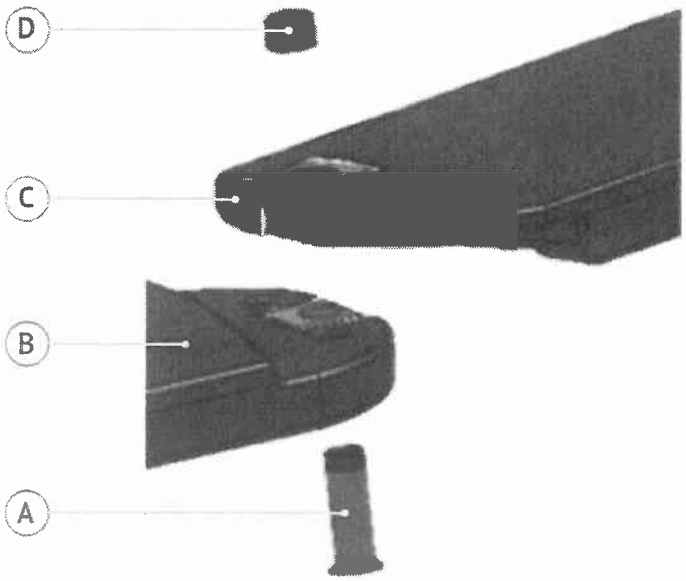


Figure 3: Assembling a Mid-Section

1. Insert a pin guide (A) from the bottom up into the fence base on the left-hand side (B).
2. Position the fence base on the right-had side (C) over the pin guide (A) and allow the pin guide to pass through the hole.

> ⓘ **Note:**
>
> The pin guide has two holes (labelled 1 and 2). Rotate the pin guide so that hole 1 is positioned towards the edge of the base. This allows the fence pin to angle if the fence is not going in a straight line.

3. Place the pin guide nut (D) on the pin guide (A) and tighten the nut to secure the assembly.

Final Steps

Once the bases have been assembled and connected, complete the final steps below.

1. Using a garden hose, fill each of the fence bases with water (approximately 8 gallons of water per base) and insert a base cap into each base.

   ⓘ **Note:**

   If installing the fence in an area that freezes, add potable anti-freeze to each base. Check with your local hardware store for product recommendations and ratios.

2. Insert the mesh fence into each of the bases. You will need to angle each pin into the pin guide before the pin drops down into position. Make sure the molding and screws are facing outwards (away from the pool).

   As you go, use the spring-loaded safety latches to secure each section of fence mesh together (place the eye on the right and the hook on the left).

   ⓘ **Note:**

   The fence is a tension-based system. The fence must be installed either as a "closed loop" (with all mesh fence sections connected to one another using the spring-loaded safety latches), or the two ends of the fence must be securely fastened to a wall or similar structure (consult with us or your local hardware store when selecting appropriate fixings).

Cleaning & Maintenance

Cleaning

We recommend establishing a schedule to clean your fence a minimum of four times a year.

To clean your fence, rinse the mesh fence and bases with cold water to remove any deteriorating pool chemicals. A mild liquid detergent may be used to clean the border material of the mesh fence, however, do not exert excessive force on the mesh panel as it could stretch the fabric over time.

If pool chemicals or debris get into the pin guide holes, remove the fence pins and flush out the holes with a garden hose.

When cleaning your patio with harsh cleaners such as acid, chlorine, bleach, etc., please ensure you dismantle the fence and remove it from the patio area. Your fence is not warrantied against chemical damage.

Maintenance

The No Holes Pool Fence requires minimal maintenance. We recommend regularly lubricating the spring-loaded safety latches by applying a silicone spray to the hook and eye assemblies located between the panels of the fence. This will maintain easy operations when removing and reinstalling your fence.

If any parts require replacement, contact your dealer.

Storage

The No Holes Pool Fence components are weatherproof and have been treated with UV inhibitors making them suitable for all weathers. When not in use simply disconnect the parts in reverse order to assembly and roll up the mesh fence panels for compact storage indoors or outdoors.
